

FLAT MAIL SLEEVE PACKAGING AND METHOD OF USE

ABSTRACT OF THE DISCLOSURE

5

A flat mail sleeve packaging system which is adapted to stack product in a constrained homogenous mass. The system includes a first constraining wall and a second constraining wall. The second constraining wall is positioned with respect to the first constraining wall at a substantially perpendicular angle thereto. The first and second constraining walls are adapted for having the product placed therebetween with bound edges of the product all facing in a same direction without collapsing. A third constraining wall may also be provided forming a "U" shape with the first and second constraining walls.
